AFTER

What is Remanufacturing?

We do not repair units, but instead offer a complete reconditioning service. During this process a unit is stripped to its component parts, each component is individually tested and assessed. Every unit is rebuilt to our highest standards with great attention to detail ensuring correct finish and appearance to the original.

Armatures And Drives Being Assembled.

Starter Prepared For Final Finishing And Assembly.

How Much Does It Cost?

We can provide a guide price for remanufacture, based on the unit type that you have. A final quote will be given, once your unit has been assessed.

www.powerlite-units.com

How do I Identify My Unit?

The majority of classic units are stamped with a part number or series type allowing the unit to be identified, If in doubt we can identify a unit by its fitment or from images.

Dynamo.

Can We Remanufacture Any Unit?

We specialise in rebuilding popular modern and classic units from the 1950's to current production units. If you do have a more unusual unit please feel free to contact us with the details.

Butec Alternator

Rewinding:

With many of the classic units we remanufacture being over 40 years old, it is sometimes necessary to rewind the coils and armatures on units. We will advise if this is required before rebuilding a unit. The replacement of fully rewound parts will ensure your unit provides many more years of reliable service.

We Remanufacture Your Original Unit:

Due to the age and scarcity of units available and in order to retain originality, we will recondition your existing unit.
