

## **Important notice affecting the warranty of this Alternator**

### **Please read!**

Many electrical faults are mis-diagnosed, leading to the unnecessary change of the alternator. Faults that do not originate from the alternator, or cause the alternator to fail, will result in the subsequent failure of any replacement alternator. Therefore, please examine your old alternator for the following:

- Burnt terminal connections (due to loose / incorrect connection)
- Burnt or over-heated (solid) pulley. Red or blue burn marks around the pulley will indicate this, usually caused by a worn fan belt or incorrect tensioning.
- Excessive oil or water ingress.

If your old alternator exhibits any of the above, a replacement alternator will not solve the problem! Our replacement alternator will fail on the vehicle for exactly the same reasons, and the unit will not be covered under warranty.

**Before fitting a replacement alternator, please check all of the above and ensure that the battery is fully charged before reconnecting.**
